

Oral Cancer Screening Self-Assessment

- Are you performing a complete head and neck examination including an oral cancer screening at least 1x/year on all adult clients?
- Does your clinical team use magnification (loupes) and a dedicated light source?
- Are you using any adjunctive screening techniques such as VELscope to discover what may not be visible with white light examination?
- Are your clients aware of the fast growing sexually transmitted oral cancer profile?
- Do you have any printed material on the new profile for oral cancer?
- Does your medical history and updates include any questions regarding presence of subtle symptoms that may be related to HPV profile?
- Is there updated information on the link between HPV and oral cancer on your website?
- Are you enrolling your clients in self-examination?
